10.3 Thalassemia in Adults*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I need blood every month and feel tired before it." **Objective** • Hb 7.5 g/dL before transfusion • Pale	**ACTUAL** Excessive fatigue burden related to chronic anemia as evidenced by pre-transfusion tiredness.	• More energy after transfusion.	• Give the transfusion as prescribed, with full safety checks. • Watch for transfusion reactions. • Plan rest periods.	• Achieved as energy improves.
Subjective • "I miss the iron chelation sometimes." **Objective** • Ferritin raised • Missed doses recorded	**ACTUAL** Ineffective health self-management related to the burden of daily chelation therapy as evidenced by missed doses and elevated ferritin.	• Takes chelation therapy as prescribed.	• Explain iron overload and how it harms the heart and liver. • Agree a schedule that fits his day. • Follow ferritin.	• Outcome reached as adherence improves.
Subjective *No specific complaint* **Objective** • Many transfusions • Splenectomy	**RISK** Risk for infection as evidenced by risk factors: splenectomy and repeated transfusions.	• No serious infection.	• Make sure vaccinations are complete. • Teach him to report fever urgently. • Give prophylactic antibiotics if ordered.	• Considered met if no infection develops.
