13.4 Pelvic Inflammatory Disease*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have lower abdominal pain and discharge." **Objective** • Temperature 38.4 °C • Cervical motion tenderness • Purulent vaginal discharge	**ACTUAL** Acute pain related to pelvic infection as evidenced by lower abdominal pain and tenderness.	• Pain controlled within 48 hours of treatment.	• Give antibiotics as prescribed and stress finishing the course. • Give analgesia. • Sit her semi-Fowler to aid drainage.	• Outcome reached when pain is controlled.
Subjective • "How did I get this?" **Objective** • Partner untreated • Cannot describe prevention	**ACTUAL** Inadequate health knowledge related to transmission and prevention as evidenced by questioning.	• Can explain why the partner needs treatment and how to prevent reinfection.	• Explain why her partner must be treated as well. • Teach safer sex practices. • Advise abstinence until treatment is finished.	• Considered met when she describes the plan.
Subjective *No specific complaint* **Objective** • Inflamed fallopian tubes • Partner untreated	**RISK** Risk for infection [recurrence] as evidenced by risk factors: re-exposure to an untreated partner and incomplete treatment.	• Finishes treatment and follow-up without reinfection.	• Book a review after treatment. • Explain the long-term risks of untreated PID, including infertility and ectopic pregnancy. • Ask her to return if pain or fever comes back.	• Goal reached when treatment and follow-up are complete.
