14.9 Multiple Organ Dysfunction Syndrome (MODS)*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective *No specific complaint* **Objective** • Mechanically ventilated, FiO_2 0.7 • Low PaO_2 • Bilateral infiltrates	**ACTUAL** Impaired gas exchange related to alveolar–capillary injury as evidenced by hypoxemia despite high inspired oxygen.	• Oxygenation within the targets set by the physician.	• Follow ABG and ventilator settings. • Use lung-protective ventilation as ordered. • Position and prone per protocol. • Suction when needed.	• Met when oxygenation is on target.
Subjective *No specific complaint* **Objective** • Urine 10 mL/hour • Creatinine rising • Fluid balance +4 L	**ACTUAL** Excessive fluid volume related to acute kidney injury as evidenced by oliguria, rising creatinine and positive fluid balance.	• Fluid balance on target.	• Measure urine hourly and track fluid balance. • Prepare for renal replacement therapy as ordered. • Follow electrolytes.	• Achieved when on target.
Subjective *No specific complaint* **Objective** • Sedated • Immobile • Edematous	**RISK** Risk for adult pressure injury as evidenced by risk factors: immobility, edema and hypoperfusion.	• Skin intact.	• Turn every 2 hours as tolerated. • Use pressure-redistributing surfaces. • Check the skin, including under devices, every shift.	• Outcome reached if the skin stays intact.
