18.15 ADHD and Autism Spectrum Disorder in Children*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Teacher reports, "He cannot sit still and interrupts others." **Objective** • Inattentive • Hyperactive • Impulsive	**ACTUAL** Ineffective impulse control related to a neurodevelopmental disorder as evidenced by interrupting, hyperactivity and acting without forethought.	• Follows a simple routine with fewer disruptive episodes.	• Give simple, one-step instructions. • Keep the routine the same. • Praise the wanted behavior straight away. • Give medication as prescribed; watch appetite and sleep.	• Met as episodes become fewer.
Subjective • Mother says, "She does not look at people or play with others." **Objective** • Little eye contact • Repetitive play • Distressed by change	**ACTUAL** Impaired social interaction related to autism spectrum disorder as evidenced by poor eye contact and limited reciprocal play.	• Tolerates structured interaction with a familiar person.	• Keep her surroundings predictable. • Use visual schedules. • Refer to speech and behavioral therapy.	• Achieved when interaction is tolerated.
Subjective *No specific complaint* **Objective** • Impulsive • Little sense of danger	**RISK** Risk for physical injury as evidenced by risk factors: impulsivity and limited awareness of danger.	• No injury.	• Teach the parents home safety measures. • Supervise closely near roads and water.	• Outcome reached if no injury occurs.
