4.19 Abdominal Aortic Aneurysm*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel a pulsing in my abdomen." **Objective** • Pulsatile abdominal mass • Aneurysm confirmed on ultrasound	**ACTUAL** Inadequate health knowledge related to the diagnosis and planned surgery as evidenced by questioning.	• Knows the warning signs of rupture and can describe the care plan.	• Explain the condition and the surgical plan. • Advise against heavy lifting and straining. • Teach him to go to the emergency department immediately for sudden back or abdominal pain.	• Met when he states the warning signs.
Subjective • "I am afraid of the operation." **Objective** • Anxious • Sleeping poorly before surgery	**ACTUAL** Excessive anxiety related to major surgery as evidenced by expressed fear.	• Reports less anxiety.	• Explain the surgery and what recovery will be like. • Invite questions. • Include the family in pre-operative teaching.	• Achieved when he is calmer.
Subjective *No specific complaint* **Objective** • Aortic aneurysm • Hypertension	**RISK** Risk for excessive bleeding as evidenced by risk factors: potential aneurysm rupture.	• BP on target; any rupture recognized early.	• Control BP as prescribed. • Watch for sudden pain, hypotension and tachycardia. • Report such findings immediately.	• Outcome reached while his condition remains stable.
