6.19 Viral Hepatitis*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel tired all day and my eyes are yellow." **Objective** • Jaundice • Raised ALT and bilirubin • Dark urine	**ACTUAL** Excessive fatigue burden related to hepatic inflammation as evidenced by persistent tiredness and reduced activity.	• Energy returns gradually within 2 weeks.	• Encourage rest in the acute phase. • Increase activity step by step. • Follow liver function tests.	• Outcome reached as energy improves.
Subjective • "I feel sick and do not want to eat." **Objective** • Nausea • Eating little	**ACTUAL** Ineffective nausea self-management related to hepatic dysfunction as evidenced by reported nausea and reduced intake.	• Takes enough by mouth.	• Offer small, frequent meals, with the biggest in the morning when nausea is least. • Advise no alcohol at all. • Avoid liver-toxic drugs, including too much paracetamol, unless ordered.	• Considered met once intake is adequate.
Subjective • Lives with his wife and children **Objective** • Hepatitis A, B or C confirmed	**RISK** Risk for infection [transmission to others] as evidenced by risk factors: transmissible viral infection.	• No spread to contacts.	• Explain how it spreads: fecal–oral for A and E, blood and body fluids for B and C. • Teach hand hygiene and not sharing razors or toothbrushes. • Encourage hepatitis B vaccination for the household.	• Goal reached when precautions are stated.
