14.13 Drowning*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Pulled from the water after several minutes **Objective** • Coughing frothy sputum • SpO_2 84% • Crackles	**ACTUAL** Impaired gas exchange related to aspiration of water and surfactant loss as evidenced by hypoxemia and crackles.	• SpO_2 94% or above within 6 hours.	• Give high-flow oxygen; prepare for CPAP or intubation. • Follow SpO_2, RR and ABG. • Sit him upright if conscious. • Observe for at least the period set by policy, as lung injury can progress.	• Outcome reached at target SpO_2.
Subjective *No specific complaint* **Objective** • Temperature 34.5 °C • Wet clothing	**ACTUAL** Decreased body temperature related to cold-water immersion as evidenced by a temperature of 34.5 °C.	• Normal temperature within 2 hours.	• Remove wet clothing. • Apply warm blankets and give warmed fluids. • Follow temperature.	• Considered met once temperature is normal.
Subjective *No specific complaint* **Objective** • Aspirated water	**RISK** Risk for infection as evidenced by risk factors: aspiration of contaminated water (pneumonia).	• No chest infection.	• Follow temperature, sputum and chest X-ray as ordered. • Give antibiotics if prescribed.	• Goal reached if no infection develops.
