15.10 Gestational Diabetes*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I did not have diabetes before." **Objective** • Abnormal glucose tolerance test at 26 weeks • Cannot state her glucose targets	**ACTUAL** Inadequate health knowledge related to a new diagnosis of gestational diabetes as evidenced by questioning.	• Checks her own glucose and describes the dietary plan.	• Teach glucose monitoring and the targets. • Refer to the dietitian. • Teach insulin injection if prescribed. • Encourage regular light exercise.	• Outcome reached when she demonstrates it.
Subjective • "Will diabetes harm my baby?" **Objective** • Worried • Asks about the baby's size	**ACTUAL** Excessive anxiety related to the effect of diabetes on the fetus as evidenced by worry.	• Less anxious.	• Explain that good glucose control lowers the risk. • Explain how the baby's growth will be checked. • Invite questions.	• Considered met when she is calmer.
Subjective *No specific complaint* **Objective** • Gestational diabetes • Fasting glucose above target	**RISK** Risk for ineffective blood glucose pattern self-management as evidenced by risk factors: insulin resistance of pregnancy and a newly learned self-monitoring regimen.	• Blood glucose stays on target.	• Go through her glucose record at each visit. • Teach hypoglycemia management if she is on insulin. • Arrange postpartum glucose testing.	• Goal reached while glucose is on target.
