15.16 Cesarean Section*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "The wound hurts when I move or feed the baby." • Rates pain 7/10 **Objective** • Low transverse abdominal incision • Guarding • Reluctant to move	**ACTUAL** Acute pain related to the surgical incision as evidenced by a pain score of 7/10 and reluctance to move.	• Pain at or below 3/10 and up and walking within 24 hours.	• Give regular analgesia as prescribed. • Teach her to hold a pillow over the wound when coughing or moving. • Help her the first time she walks. • Encourage early mobilization.	• Met when pain is controlled and she is walking.
Subjective • "I cannot find a comfortable way to feed." **Objective** • Poor latch • Pain when holding the baby	**ACTUAL** Ineffective chestfeeding related to post-operative pain and positioning difficulty as evidenced by poor latch.	• Feeding effectively within 48 hours.	• Teach side-lying and football-hold positions that keep pressure off the wound. • Give analgesia before feeds. • Watch a feed and help with the latch.	• Achieved when the baby feeds well.
Subjective *No specific complaint* **Objective** • Operative birth • Uterine atony possible	**RISK** Risk for excessive bleeding as evidenced by risk factors: operative birth and possible uterine atony.	• Fundus firm; lochia normal.	• Check fundus, lochia, wound and vital signs per protocol. • Give a uterotonic as prescribed. • Report heavy bleeding at once.	• Outcome reached if no hemorrhage occurs.
