17.3 Pneumonia in Children*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says, "She coughs and breathes fast." **Objective** • 3 years old; RR 48/min • Crackles at the right base • SpO_2 91%; chest indrawing	**ACTUAL** Ineffective airway clearance related to inflammation and secretions as evidenced by crackles, tachypnea and chest indrawing.	• SpO_2 94% or above and less work of breathing within 48 hours.	• Give oxygen as prescribed. • Sit her upright or semi-Fowler. • Give antibiotics on time. • Encourage fluids. • Check RR, SpO_2 and recession every 2–4 hours.	• Goal reached as breathing improves.
Subjective • Mother says, "She feels hot." **Objective** • Temperature 39 °C • Flushed and irritable	**ACTUAL** Hyperthermia related to infection as evidenced by a temperature of 39 °C.	• Temperature below 38 °C within 4 hours.	• Give a weight-based antipyretic as prescribed. • Dress her lightly. • Recheck temperature after an hour.	• Met as temperature falls.
Subjective *No specific complaint* **Objective** • Fever • Fast breathing; drinking less	**RISK** Risk for inadequate fluid volume as evidenced by risk factors: fever, tachypnea and reduced intake.	• Stays well hydrated.	• Offer drinks often. • Count wet diapers or measure urine output. • Give IV fluids if ordered.	• Achieved while she is hydrated.
