18.12 Eating Disorders*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I am still too fat." **Objective** • Very low BMI • Restricts food • Exercises excessively	**ACTUAL** Inadequate nutritional intake related to restriction of intake as evidenced by a markedly low BMI and food restriction.	• Follows the meal plan and gains weight as set by the treatment team.	• Follow the specialist meal plan; supervise meals and the time after them. • Weigh in the same way each time, per protocol. • Do not bargain over food; stay calm and consistent. • Work with the dietitian and the mental health team.	• Achieved when the plan is followed.
Subjective • "I hate my body." **Objective** • Sees her body as larger than it is • Checks the mirror often	**ACTUAL** Disrupted body image related to distorted perception of body size as evidenced by negative statements despite low weight.	• Talks about her feelings and engages in therapy.	• Keep conversations on feelings, not on weight. • Support psychological therapy.	• Outcome reached when she engages.
Subjective *No specific complaint* **Objective** • Severe restriction • Nutritional rehabilitation starting	**RISK** Risk for impaired water-electrolyte balance as evidenced by risk factors: malnutrition and refeeding syndrome.	• Electrolytes stay normal.	• Check phosphate, potassium and magnesium daily at first. • Watch the ECG as ordered. • Give supplements as prescribed.	• Considered met if values remain normal.
