2.24 Discharge Planning*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I am not sure how to take my new medicines." **Objective** • Cannot state when to take each medicine • New prescriptions at discharge	**ACTUAL** Inadequate health knowledge related to a new treatment regimen as evidenced by inaccurate statements about medications.	• Before discharge, states the name, dose, timing and main side effects of each medicine.	• Assess knowledge, literacy and preferred language. • Teach one medicine at a time in simple terms, with a written schedule. • Confirm understanding with teach-back. • Include the relative who helps with her medicines.	• Achieved when she explains her medicines correctly.
Subjective • "I often forget my medicines at home." **Objective** • Previous readmissions • Frequently missed doses	**ACTUAL** Ineffective health self-management related to a complex regimen as evidenced by missed doses and readmissions.	• Describes how she will manage treatment at home.	• Ask the physician whether the regimen can be simplified. • Suggest a pill organizer and reminders. • Book a follow-up appointment.	• Outcome reached if she presents a realistic plan.
Subjective • A relative says, "I don't know how I will manage." **Objective** • Dependent for all ADL • One caregiver only	**RISK** Risk for excessive caregiving burden as evidenced by risk factors: care receiver dependence and insufficient support.	• Before discharge, the caregiver names sources of support.	• Assess what the caregiver can manage and what they need. • Teach the necessary care skills. • Refer to community or social services.	• Considered met when support sources are identified.
