2.8 Infection and Isolation Precautions*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel lonely in this room." **Objective** • Single room, contact precautions • Few visitors • Quiet and withdrawn	**ACTUAL** Inadequate social connectedness related to infection control precautions as evidenced by expressed loneliness and withdrawal.	• Reports feeling less alone within 48 hours.	• Explain why she is isolated and for roughly how long. • Visit for conversation, not only for procedures. • Encourage telephone contact with her family. • Teach visitors to use protective equipment so they can keep coming.	• Considered met when she says she feels less isolated.
Subjective • "Why do the staff wear gowns?" • "Can my children visit?" **Objective** • Removes her mask at the door • Hand hygiene performed incorrectly	**ACTUAL** Inadequate health knowledge related to transmission-based precautions as evidenced by questioning and incorrect practice.	• Patient and family show correct hand hygiene and precautions within 24 hours.	• Explain how this organism is spread. • Demonstrate hand hygiene and putting on a mask and gown. • Give written instructions. • Watch a return demonstration.	• Goal reached when both are performed correctly.
Subjective *No specific complaint* **Objective** • Culture grows a multidrug-resistant organism • IV cannula and urinary catheter in place • Long admission	**RISK** Risk for infection as evidenced by risk factors: invasive devices and prolonged hospitalization.	• No new infection: temperature and WBC normal, device sites clean.	• Clean hands before and after every contact. • Keep equipment dedicated to this patient. • Inspect device sites daily and remove any that are no longer needed. • Follow temperature and WBC.	• Met if no new infection develops.
