3.5 Bronchiectasis*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I cough up large amounts of phlegm every morning." **Objective** • Copious purulent sputum • Coarse crackles • Finger clubbing	**ACTUAL** Ineffective airway clearance related to excessive bronchial secretions as evidenced by copious sputum and coarse crackles.	• Clears secretions well and demonstrates airway clearance techniques.	• Teach postural drainage and the active cycle of breathing techniques, as ordered. • Encourage fluids to loosen sputum. • Give nebulized saline or a mucolytic as prescribed. • Note sputum volume, color and smell.	• Outcome reached as sputum lessens and breath sounds improve.
Subjective • "I feel weak and have lost weight." **Objective** • Lost 4 kg in 2 months • Poor appetite	**ACTUAL** Inadequate nutritional intake related to increased energy expenditure and anorexia as evidenced by weight loss.	• Weight steady within 2 weeks.	• Offer mouth care before meals. • Provide small, frequent high-protein meals. • Refer to the dietitian. • Weigh weekly.	• Considered met if weight is stable.
Subjective *No specific complaint* **Objective** • Chronic retention of secretions • Recurrent infections	**RISK** Risk for infection as evidenced by risk factors: stasis of secretions and structurally damaged airways.	• Reports infection early, avoiding admission.	• Ask her to report fever, more sputum or any blood in it. • Send sputum for culture as ordered. • Encourage vaccination.	• Goal reached once she can list the warning signs.
