6.10 Peritonitis*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My whole abdomen hurts; I cannot move." **Objective** • Board-like rigidity • Rebound tenderness • Lies still with the knees bent	**ACTUAL** Acute pain related to peritoneal inflammation as evidenced by severe generalized pain and rigidity.	• Pain at or below 3/10 after treatment.	• Give analgesia as prescribed. • Let her keep her knees bent. • Nil by mouth; pass an NG tube as ordered. • Prepare for surgery.	• Met when pain is controlled.
Subjective • "I am very thirsty." **Objective** • HR 120/min • Urine 15 mL/hour • NG drainage 800 mL	**ACTUAL** Inadequate fluid volume related to fluid shift into the peritoneal cavity and NG losses as evidenced by tachycardia and low urine output.	• Urine at least 0.5 mL/kg/hour within 8 hours.	• Give IV fluids as prescribed. • Measure urine output and NG losses hourly. • Follow electrolytes.	• Achieved with adequate output.
Subjective *No specific complaint* **Objective** • Peritoneal infection • Temperature 39 °C	**RISK** Risk for shock as evidenced by risk factors: sepsis and hypovolemia.	• MAP above 65 mmHg.	• Give antibiotics on time. • Follow vital signs and lactate as ordered. • Report hypotension, confusion or mottled skin.	• Outcome reached while hemodynamics remain stable.
