6.24 Malnutrition*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I eat very little." **Objective** • BMI 16.5 kg/m² • Muscle wasting • Low albumin	**ACTUAL** Inadequate protein energy nutritional intake related to insufficient dietary intake as evidenced by low BMI, muscle wasting and hypoalbuminemia.	• Steady weight gain within 2 weeks.	• Carry out nutritional screening. • Refer to the dietitian. • Offer oral supplements between meals. • Weigh twice a week. • Chart food intake.	• Outcome reached as weight increases.
Subjective • "I am too weak to walk far." **Objective** • Muscle weakness • Exhausted after 20 meters	**ACTUAL** Decreased activity tolerance related to muscle wasting as evidenced by weakness.	• Gradually does more.	• Plan graded activity with rest periods. • Refer to the physiotherapist. • Check HR during activity.	• Considered met as tolerance improves.
Subjective *No specific complaint* **Objective** • Severe malnutrition • Nutritional support starting	**RISK** Risk for impaired water-electrolyte balance as evidenced by risk factors: refeeding syndrome.	• Phosphate, potassium and magnesium stay within normal range.	• Start feeding slowly, as prescribed. • Check electrolytes daily in the first days. • Give thiamine before feeding, as ordered.	• Goal reached if values remain normal.
