6.7 Crohn's Disease*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have cramps and diarrhea many times a day." **Objective** • Six stools a day • Tender right lower quadrant	**ACTUAL** Impaired gastrointestinal motility related to intestinal inflammation as evidenced by frequent loose stools and cramping.	• Fewer stools within 1 week of treatment.	• Chart bowel frequency. • Give anti-inflammatory and immunosuppressive drugs as prescribed. • Keep her hydrated. • Protect the perianal skin.	• Achieved as stool frequency falls.
Subjective • "I avoid eating to avoid pain." **Objective** • Lost 5 kg • Low albumin	**ACTUAL** Inadequate nutritional intake related to malabsorption and reduced intake as evidenced by weight loss.	• Weight steady within 2 weeks.	• Refer to the dietitian. • Offer small, high-energy meals. • Weigh weekly. • Give supplements as prescribed.	• Outcome reached if weight is stable.
Subjective *No specific complaint* **Objective** • Immunosuppressive therapy • Corticosteroids	**RISK** Risk for infection as evidenced by risk factors: immunosuppression.	• No infection.	• Ask her to report fever promptly. • Teach hand hygiene. • Check her vaccination status.	• Considered met if she stays free of infection.
