7.6 Chronic Kidney Disease*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My legs swell and I gain weight easily." **Objective** • eGFR below 30 mL/min • Edema • BP 150/95 mmHg	**ACTUAL** Excessive fluid volume related to impaired renal function as evidenced by edema, weight gain and hypertension.	• Weight gain stays within the prescribed limits.	• Teach daily self-weighing. • Teach the fluid and sodium limits. • Give antihypertensives and diuretics as prescribed. • Follow electrolytes and creatinine.	• Met when weight stays within limits.
Subjective • "I do not know which foods to avoid." **Objective** • High potassium and phosphate • Eats dates and bananas daily	**ACTUAL** Inadequate health knowledge related to the renal diet as evidenced by questioning and abnormal potassium and phosphate.	• Plans a renal diet with the dietitian.	• Teach which foods are high in potassium (bananas, dates, tomatoes) and phosphate. • Explain that phosphate binders are taken with meals. • Refer to the dietitian.	• Achieved when the diet is planned correctly.
Subjective *No specific complaint* **Objective** • Anemia of CKD • Uremia	**RISK** Risk for decreased activity tolerance as evidenced by risk factors: anemia and uremia.	• Keeps up daily activities.	• Follow hemoglobin. • Give the erythropoiesis-stimulating agent and iron as prescribed. • Plan rest periods.	• Outcome reached if activity is maintained.
