9.7 Total Knee Replacement*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Rates pain 7/10 when bending the knee **Objective** • Knee swelling • Knee bends only a little	**ACTUAL** Acute pain related to surgery as evidenced by pain on movement.	• Pain low enough (4/10 or less) to do the knee exercises.	• Give regular analgesia, especially before physiotherapy. • Apply cold therapy as ordered. • Elevate the leg without a pillow under the knee.	• Met when pain is controlled.
Subjective • "It is hard to bend my knee." **Objective** • Knee flexion 60°	**ACTUAL** Impaired physical mobility related to pain and stiffness as evidenced by limited knee flexion.	• Knee flexion of 90°, or the physiotherapy target, before discharge.	• Encourage knee exercises and continuous passive motion if ordered. • Walk with an aid as instructed. • Measure knee flexion each day.	• Achieved when the target is reached.
Subjective *No specific complaint* **Objective** • Joint prosthesis • Wound dressing	**RISK** Risk for surgical wound infection as evidenced by risk factors: joint prosthesis.	• Wound heals without infection.	• Use aseptic wound care. • Follow temperature. • Ask her to report redness, swelling or discharge.	• Outcome reached if no infection develops.
