4.14 Cardiac Catheterization and PCI*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "What will happen during the procedure?" **Objective** • First catheterization • Restless; asks many questions	**ACTUAL** Excessive anxiety related to an invasive procedure as evidenced by questioning and worry.	• Understands the procedure and feels less anxious.	• Explain the procedure, what she will feel and the aftercare. • Ask about allergy to contrast or iodine. • Check renal function and anticoagulant status beforehand. • Leave time for questions.	• Met when she is calm and informed.
Subjective • "My leg feels heavy and I want to bend it." **Objective** • Femoral access site • Bed rest ordered	**ACTUAL** Impaired physical mobility related to prescribed bed rest after femoral access as evidenced by ordered immobility.	• Keeps the leg straight for the ordered time without complications.	• Keep the leg straight as ordered. • Check the site, distal pulses, color and warmth regularly.	• Achieved if pulses are normal and the site is dry.
Subjective *No specific complaint* **Objective** • Arterial puncture • On antiplatelet and anticoagulant therapy	**RISK** Risk for excessive bleeding as evidenced by risk factors: arterial puncture and antithrombotic therapy.	• No hematoma or bleeding at the puncture site.	• Check the site with every set of vital signs, per protocol. • If bleeding starts, apply pressure and report immediately. • Watch for back pain or hypotension, which may mean retroperitoneal bleeding.	• Outcome reached if no bleeding occurs.
