6.16 Cholecystitis and Cholecystectomy*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "Severe pain under my right ribs after a fatty meal." • Pain spreads to the right shoulder **Objective** • Tender right upper quadrant • Positive Murphy sign • Temperature 38.1 °C	**ACTUAL** Acute pain related to gallbladder inflammation and obstruction as evidenced by right upper quadrant pain and a positive Murphy sign.	• Pain at or below 3/10 within 2 hours of treatment.	• Give analgesia and an antispasmodic as prescribed. • Nil by mouth during the acute attack, as ordered. • Give IV antibiotics if prescribed. • Prepare for surgery. • Watch for jaundice, dark urine and pale stools.	• Considered met when pain is controlled.
Subjective • "What can I eat now?" • "Why does my shoulder hurt?" **Objective** • After laparoscopic cholecystectomy • Cannot state the dietary advice	**ACTUAL** Inadequate health knowledge related to post-operative care and diet as evidenced by questioning.	• Before discharge, repeats the dietary advice and warning signs.	• Explain that shoulder-tip pain comes from the gas used and settles with walking. • Advise a normal diet, cutting back on fatty food at first if it causes discomfort. • Teach wound care. • Ask her to report jaundice, fever or worsening pain.	• Goal reached when she repeats the advice.
Subjective *No specific complaint* **Objective** • Surgical incisions • Inflamed gallbladder removed	**RISK** Risk for surgical wound infection as evidenced by risk factors: surgical incisions and infected gallbladder.	• Wounds heal without infection.	• Watch the wounds and temperature. • Keep dressings dry and intact.	• Met if no infection develops.
