6.23 Bariatric Surgery*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel full after a few spoons." • "What can I eat now?" **Objective** • After sleeve gastrectomy or bypass • Cannot describe the diet stages	**ACTUAL** Inadequate health knowledge related to post-operative dietary progression as evidenced by questioning.	• Describes the diet progression before discharge.	• Teach the stages: clear fluids, purée, soft food, then a normal diet, as advised. • Teach small portions, eating slowly and stopping when full. • Suggest drinking between meals, not with them. • Explain the need for lifelong vitamin and mineral supplements.	• Goal reached when she describes the plan correctly.
Subjective • Rates pain 6/10 **Objective** • Laparoscopic wounds • Shoulder-tip pain	**ACTUAL** Acute pain related to surgery as evidenced by a pain score of 6/10.	• Pain at or below 3/10 within 24 hours.	• Give analgesia as prescribed. • Get her walking early to ease shoulder-tip pain. • Support the wounds when she coughs.	• Met when pain is controlled.
Subjective *No specific complaint* **Objective** • BMI above 40 kg/m² • Abdominal surgery	**RISK** Risk for thrombosis as evidenced by risk factors: obesity and surgery.	• No DVT or pulmonary embolism.	• Mobilize early. • Give prophylactic anticoagulation as ordered. • Apply compression devices.	• Achieved if no DVT develops.
