7.10 Kidney Transplant*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "How long will I take these medicines?" **Objective** • Immunosuppression started • Cannot name his medicines	**ACTUAL** Inadequate health knowledge related to lifelong immunosuppression as evidenced by questioning.	• Names each drug, when to take it and why it matters.	• Teach that immunosuppressants must never be missed or stopped. • Explain why drug levels are checked. • Teach the signs of rejection: fever, a tender graft, less urine, weight gain.	• Outcome reached when he explains the regimen.
Subjective • "Is it normal that my urine changes?" **Objective** • Urine output varies • Creatinine being followed	**ACTUAL** Impaired urinary elimination related to early graft function as evidenced by variable urine output.	• Adequate urine output with creatinine falling.	• Measure urine hourly in the early period. • Give fluids as prescribed. • Report any sudden drop in output.	• Considered met with adequate output.
Subjective *No specific complaint* **Objective** • Immunosuppressed • Recent transplant	**RISK** Risk for infection as evidenced by risk factors: immunosuppressive therapy.	• No infection.	• Teach hand hygiene. • Advise keeping away from people with infections. • Ask him to report fever.	• Goal reached if no infection develops.
