8.6 Diabetic Foot Ulcer*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I did not feel the wound until I saw blood on my sock." **Objective** • 2 × 2 cm ulcer on the sole • Reduced sensation • Weak pedal pulses	**ACTUAL** Impaired tissue integrity related to neuropathy and impaired circulation as evidenced by a plantar ulcer.	• Ulcer showing signs of healing within 2 weeks.	• Measure and document the wound weekly. • Dress the wound as prescribed. • Offload with therapeutic footwear or non-weight-bearing, as ordered. • Keep glucose under control.	• Met as the wound gets smaller.
Subjective • "I cannot walk normally." **Objective** • Non-weight-bearing ordered • Unsteady on crutches	**ACTUAL** Impaired walking ability related to an offloading requirement as evidenced by prescribed restriction.	• Moves about safely with aids and without weight on the ulcer.	• Provide crutches, a walker or a wheelchair. • Teach safe use of the aids. • Check for fall hazards at home.	• Achieved when mobilizing safely.
Subjective *No specific complaint* **Objective** • Open wound • Glucose above target	**RISK** Risk for infection as evidenced by risk factors: open wound and hyperglycemia.	• No spreading infection.	• Watch for redness, swelling, odor and fever. • Take a wound swab as ordered. • Keep glucose under control.	• Outcome reached if no infection develops.
