8.8 Thyroid Storm*

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective *No specific complaint* **Objective** • Temperature 40 °C • HR 160/min • Agitated	**ACTUAL** Hyperthermia related to excess thyroid hormone as evidenced by a temperature of 40 °C.	• Temperature below 38.5 °C within 6 hours.	• Start cooling measures. • Give paracetamol as ordered; aspirin is avoided. • Give the antithyroid drug, iodine, beta-blocker and corticosteroid as prescribed.	• Achieved as temperature falls.
Subjective *No specific complaint* **Objective** • HR 160/min, atrial fibrillation • BP 90/50 mmHg • Cool peripheries	**ACTUAL** Ineffective peripheral tissue perfusion related to rapid ventricular rate as evidenced by hypotension and cool peripheries.	• HR below 100/min within 6 hours, with warm peripheries.	• Keep her on continuous ECG monitoring. • Give the beta-blocker as prescribed. • Follow BP and watch for heart failure.	• Outcome reached when the rate is controlled.
Subjective *No specific complaint* **Objective** • Agitated • Confused	**RISK** Risk for physical injury as evidenced by risk factors: agitation and delirium.	• No injury.	• Keep the room calm and cool. • Observe her closely. • Keep the bed low; use rails per policy.	• Considered met if no injury occurs.
