10.11 HIV Infection and AIDS

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have diarrhea and lost a lot of weight." **Objective** • Lost 10% of his weight • Oral thrush • CD4 count low	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to opportunistic infections and diarrhea as evidenced by weight loss and oral thrush.	Within 2 weeks, weight steady.	• Treat the oral thrush as prescribed. • Offer small meals often, high in protein. • Treat the diarrhea and keep him hydrated. • Refer to the dietitian.	Weight steady: **goal met**.
Subjective • "Must I take tablets every day for life?" **Objective** • Starting antiretroviral therapy • Cannot name his drugs	**ACTUAL** **Deficient knowledge** related to antiretroviral therapy as evidenced by questions.	Before discharge, can explain why he must take his tablets every day.	• Explain that missed doses can lead to drug resistance. • Help him build a daily routine with reminders. • Explain why viral load and CD4 count are checked. • Teach how to prevent passing the virus on.	Describes his plan: **goal met**.
Subjective • *No specific complaint* **Objective** • CD4 count low	**RISK** **Risk for infection** as evidenced by risk factors: immunodeficiency.	No opportunistic infection.	• Give prophylactic medicines as ordered. • Tell him to report fever, cough, headache or diarrhea. • Keep his information confidential and care for him without judgment.	No infection: **goal met**.
