10.14 Chemotherapy

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel sick for days after each cycle." **Objective** • Vomits 3 times a day • Eating less	**ACTUAL** **Nausea** related to effects of chemotherapy as evidenced by nausea and vomiting.	Says the nausea is less and keeps eating and drinking.	• Give antiemetics before the chemotherapy and regularly afterwards, as prescribed. • Offer small, bland, cold meals. • Keep strong smells away. • Chart what she eats and any vomiting.	Less nausea: **goal met**.
Subjective • "My hair is falling out; I do not want to go out." **Objective** • Hair falling out • Tearful	**ACTUAL** **Disturbed body image** related to hair loss as evidenced by distress and avoiding going out.	Uses ways of coping with the hair loss.	• Explain that hair usually grows back after treatment. • Before the hair falls out, talk about wigs, scarves and head covers. • Let her talk about how she feels.	Coping: **goal met**.
Subjective • *No specific complaint* **Objective** • Vesicant drugs going through a peripheral line	**RISK** **Risk for injury** as evidenced by risk factors: extravasation of vesicant chemotherapy.	Finishes treatment without an extravasation injury.	• Check for blood return and look at the IV site before and during the infusion. • Ask her to tell you about any pain or burning at the site. • If you suspect extravasation: stop the infusion, leave the cannula in, and follow the extravasation protocol.	No injury: **goal met**.
