10.16 Bone Marrow (Stem Cell) Transplant

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "When will my blood counts recover?" • "Will the transplant work?" **Objective** • All blood counts low after conditioning • Sleeping badly	**ACTUAL** **Anxiety** related to prolonged treatment and uncertain outcome as evidenced by worry and insomnia.	Says she feels less anxious.	• Explain roughly how long engraftment is expected to take. • Keep her updated on her blood counts. • Offer psychological support.	Calmer: **goal met**.
Subjective • "I have a rash and diarrhea." **Objective** • Raised red rash on the palms • Diarrhea • Had an allogeneic transplant	**ACTUAL** **Impaired skin integrity** related to graft-versus-host disease as evidenced by rash.	Rash gets better with treatment.	• Report rash, diarrhea or jaundice quickly. • Give immunosuppressive therapy as prescribed. • Be gentle with skin care.	Rash improving: **goal met**.
Subjective • *No specific complaint* **Objective** • Severely immunosuppressed • Central line in situ	**RISK** **Risk for infection** as evidenced by risk factors: immunosuppression and invasive device.	No infection.	• Keep her in protective isolation. • Strict hand hygiene. • Watch her temperature and the line site.	No infection: **goal met**.
