10.4 Aplastic Anemia

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel weak and get breathless quickly." **Objective** • Hb 7 g/dL • Pale • HR 110/min on exertion	**ACTUAL** **Activity intolerance** related to reduced oxygen-carrying capacity as evidenced by weakness, exertional dyspnea and low Hb.	Within 1 week, manages self-care with rests and without breathlessness.	• Plan care so he can rest between activities. • Give the red cell transfusion as prescribed, with safety checks. • Check HR and SpO_2 while he is active. • Give the immunosuppressive therapy as prescribed and watch for side effects.	Copes with ADL: **goal met**.
Subjective • "My gums bleed when I brush." **Objective** • Platelets 15 × 10^9/L • Petechiae on the legs • Gums bleeding	**ACTUAL** **Impaired oral mucous membrane integrity** related to thrombocytopenia as evidenced by gum bleeding.	No active bleeding from the mouth within 48 hours.	• Use a soft toothbrush or sponge swabs. • No alcohol-based mouthwash. • Give the platelet transfusion as prescribed. • No IM injections and no rectal procedures.	No bleeding from the mouth: **goal met**.
Subjective • *No specific complaint* **Objective** • Neutrophils 0.3 × 10^9/L • Central line in situ	**RISK** **Risk for infection** as evidenced by risk factors: severe neutropenia and invasive line.	No infection, and any fever treated within 1 hour.	• Protective isolation as policy says. • Strict hand hygiene. • Temperature every 4 hours; treat any fever as neutropenic sepsis. • Look at the line site every day.	No infection: **goal met**.
