10.9 Hemophilia

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "My knee swelled after a small fall." • Gives the pain 7/10 **Objective** • Bleeding into the knee • Factor • VIII deficiency • Knee movement limited	**ACTUAL** **Acute pain** related to bleeding into the joint as evidenced by swelling, pain and limited movement.	Bleeding stopped and pain 3/10 or less within 24 hours.	• Give factor concentrate at once, as prescribed. • Rest, ice, compression, elevation. • Paracetamol or opioid as prescribed; no aspirin or NSAIDs. • No IM injections.	Pain controlled, swelling going down: **goal met**.
Subjective • "How do I give the factor at home?" **Objective** • Home treatment planned • Cannot explain reconstitution	**ACTUAL** **Deficient knowledge** related to home factor replacement as evidenced by questions.	Patient or carer prepares and gives the factor IV correctly.	• Teach reconstitution and IV injection. • Teach keeping a record of doses and bleeds. • Teach when to get urgent help (head injury, large bleeds).	Shows you correctly: **goal met**.
Subjective • *No specific complaint* **Objective** • Severe factor deficiency	**RISK** **Risk for bleeding** as evidenced by risk factors: clotting factor deficiency.	No major bleeds.	• Suggest safe exercise (swimming); no contact sports. • Wear medical identification. • Teach dental care to prevent gum bleeding.	No major bleeding: **goal met**.
