11.7 Skin Grafts

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "When can I move my leg?" **Objective** • Split-thickness graft on the leg • On ordered bed rest	**ACTUAL** **Impaired physical mobility** related to immobilization of the graft site as evidenced by prescribed bed rest.	Graft takes, and he gets up when allowed.	• Keep the graft site still, as ordered. • Do not let anything press on or rub the graft. • Raise the leg. • Teach exercises for the other limbs.	Graft taking: **goal met**.
Subjective • "The donor site hurts more than the graft." **Objective** • Donor site on the thigh • Guards the thigh	**ACTUAL** **Acute pain** related to donor site wound as evidenced by reported pain.	Pain 3/10 or less.	• Give analgesia as prescribed. • Leave the donor dressing intact as the protocol says. • Position him so nothing presses on the donor site.	Controlled: **goal met**.
Subjective • *No specific complaint* **Objective** • Graft site and donor site	**RISK** **Risk for infection** as evidenced by risk factors: two open wounds.	Graft takes, and neither site becomes infected.	• Watch for a smell, discharge and fever. • Aseptic technique for dressing changes. • Watch the colour of the graft and whether it is sticking.	No infection: **goal met**.
