12.3 Retinal Detachment

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I see flashes and a curtain over my vision." **Objective** • Suddenly lost part of her visual field • Seeing floaters	**ACTUAL** **Anxiety** related to sudden vision loss as evidenced by fear and questions.	Less anxious before surgery.	• Explain why it is urgent and what the procedure involves. • Keep her calm and resting. • Let the family stay.	Calmer: **goal met**.
Subjective • "How long must I keep my head down?" **Objective** • Gas bubble in the eye after vitrectomy • Ordered to keep a set position	**ACTUAL** **Deficient knowledge** related to post-operative positioning as evidenced by questions.	Keeps her head in the prescribed position.	• Teach the exact position and how long the surgeon wants it kept. • While the gas is in the eye, no flying and no going to high altitude. • Give pillows and supports to keep her comfortable.	Keeps the position: **goal met**.
Subjective • *No specific complaint* **Objective** • Has to stay in one position • Vision reduced	**RISK** **Risk for impaired skin integrity** as evidenced by risk factors: prolonged fixed position.	Skin over pressure points stays intact.	• Check pressure areas on the face and chest. • Use padding.	Skin intact: **goal met**.
