13.1 Hysterectomy

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "The lower abdominal pain is strong." • Gives the pain 7/10 **Objective** • Incision in the abdomen • Guarding • HR 102/min	**ACTUAL** **Acute pain** related to surgical tissue trauma as evidenced by pain score 7/10 and guarding.	Pain 3/10 or less within 24 hours.	• Give analgesia regularly as prescribed (PCA if ordered). • Have her hold a pillow against her abdomen when she coughs or moves. • Get her moving early. • Watch the wound and any vaginal bleeding.	Pain controlled: **goal met**.
Subjective • "I feel I am no longer a complete woman." **Objective** • Tearful • Young, uterus removed	**ACTUAL** **Situational low self-esteem** related to loss of reproductive organ as evidenced by negative statements about self.	Talks about how she feels and can name positive things about herself.	• Give her privacy to talk about her feelings. • Give accurate information about how this affects sexuality and menopause. • If she wishes, include her husband. • Refer for counselling if needed.	Shows acceptance: **goal met**.
Subjective • *No specific complaint* **Objective** • Had pelvic surgery • Catheter out today	**RISK** **Risk for urinary retention** as evidenced by risk factors: pelvic surgery and bladder handling.	Passes enough urine within 6 hours of the catheter coming out.	• Record when she voids and how much. • If she passes very little or nothing, scan the bladder. • Encourage fluids.	Voids adequately: **goal met**.
