13.4 Pelvic Inflammatory Disease

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I have lower abdominal pain and discharge." **Objective** • Fever 38.4 °C • Pain when the cervix is moved • Purulent vaginal discharge	**ACTUAL** **Acute pain** related to pelvic infection as evidenced by lower abdominal pain and tenderness.	Within 48 hours of treatment, pain controlled.	• Give antibiotics as prescribed and stress finishing the course. • Give analgesia. • Sit her semi-Fowler to help drainage.	Pain controlled: **goal met**.
Subjective • "How did I get this?" **Objective** • Her partner has not been treated • Cannot say how to prevent it	**ACTUAL** **Deficient knowledge** related to transmission and prevention as evidenced by questions.	Can explain why her partner needs treatment and how to prevent this.	• Explain why her partner must be treated too. • Teach safe sex. • No intercourse until treatment is finished.	Describes her plan: **goal met**.
Subjective • *No specific complaint* **Objective** • Fallopian tubes inflamed	**RISK** **Risk for ineffective health self-management** as evidenced by risk factors: incomplete treatment, which may lead to infertility or ectopic pregnancy.	Finishes treatment and follow-up.	• Book a review after treatment. • Explain the long-term risks if PID is not treated. • Tell her to come back if the pain or fever returns.	Treatment and follow-up done: **goal met**.
