14.13 Drowning

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Pulled from the water after several minutes **Objective** • Coughing up frothy sputum • SpO_2 84% • Crackles	**ACTUAL** **Impaired gas exchange** related to aspiration of water and surfactant loss as evidenced by hypoxemia and crackles.	SpO_2 94% or more within 6 hours.	• Give high-flow oxygen and be ready for CPAP or intubation. • Follow SpO_2, RR and ABG. • If conscious, sit him up. • Observe for at least as long as policy says, because the lung injury can get worse.	SpO_2 on target: **goal met**.
Subjective • *No specific complaint* **Objective** • Temperature 34.5 °C • Clothes wet	**ACTUAL** **Hypothermia** related to immersion in cold water as evidenced by temperature 34.5 °C.	Temperature normal within 2 hours.	• Take off the wet clothes. • Warm blankets and warmed fluids. • Watch his temperature.	Temperature normal: **goal met**.
Subjective • *No specific complaint* **Objective** • Breathed in water	**RISK** **Risk for infection** as evidenced by risk factors: aspiration of contaminated water (pneumonia).	No chest infection.	• Watch temperature and sputum, and chest X-ray as ordered. • Give antibiotics if prescribed.	No infection: **goal met**.
