15.10 Gestational Diabetes

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I did not have diabetes before." **Objective** • Glucose tolerance test abnormal at 26 weeks • Cannot say what her glucose targets are	**ACTUAL** **Deficient knowledge** related to new diagnosis of gestational diabetes as evidenced by questions.	Checks her own glucose and can describe her diet plan.	• Teach glucose monitoring and her targets. • Refer to the dietitian. • If insulin is prescribed, teach her how to use it. • Encourage light exercise regularly.	Shows you: **goal met**.
Subjective • "Will diabetes harm my baby?" **Objective** • Worried • Asks about how big the baby is	**ACTUAL** **Anxiety** related to effect of diabetes on the fetus as evidenced by worry.	Says she feels less anxious.	• Explain that good glucose control lowers the risks. • Explain how the baby's growth will be checked. • Invite her questions.	Calmer: **goal met**.
Subjective • *No specific complaint* **Objective** • Gestational diabetes • Fasting glucose above target	**RISK** **Risk for unstable blood glucose level** as evidenced by risk factors: insulin resistance of pregnancy.	Blood glucose stays on target.	• Look over her glucose record at every visit. • If she is on insulin, teach how to treat a hypo. • Book a glucose test after the birth.	On target: **goal met**.
