15.14 Normal Labor and Birth

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "The pain comes every 3 minutes and is very strong." **Objective** • Contracting regularly every 3 minutes, each lasting 60 seconds • Cervix 6 cm dilated • Moaning and gripping the bed	**ACTUAL** **Labor pain** related to uterine contractions and cervical dilation as evidenced by strong regular contractions and pain behaviour.	Says she is coping with the contractions using the pain relief she has chosen.	• With each contraction, check her pain and how she is coping. • Encourage upright positions and walking as she can. • Teach breathing techniques and use massage. • Offer drug pain relief as available and ordered. • Encourage her to pass urine every 2 hours.	Coping with labor: **goal met**.
Subjective • "I am frightened of the birth." **Objective** • Tense • First baby	**ACTUAL** **Fear** related to unknown experience of birth as evidenced by expressed fear and tension.	Says she feels supported and informed.	• After every examination, tell her how things are going. • Encourage her to have a companion she chooses. • Stay with her and support her throughout.	Says she feels supported: **goal met**.
Subjective • *No specific complaint* **Objective** • In active labor	**RISK** **Risk for disturbed maternal-fetal dyad** as evidenced by risk factors: uterine contractions reducing placental blood flow.	Fetal heart pattern normal right through labor.	• Monitor the fetal heart rate as the protocol says (intermittent or continuous). • Record findings on the partograph. • Report an abnormal fetal heart pattern or meconium-stained liquor.	Fetal heart normal: **goal met**.
