15.16 Cesarean Section

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "The wound hurts when I move or feed the baby." • Gives the pain 7/10 **Objective** • Low transverse incision on the abdomen • Guarding • Does not want to move	**ACTUAL** **Acute pain** related to surgical incision as evidenced by pain score 7/10 and reluctance to move.	Within 24 hours, pain 3/10 or less and up and about.	• Give analgesia regularly as prescribed. • Teach her to hold a pillow over the wound when she coughs or moves. • Help her the first time she walks. • Encourage her to get moving early.	Pain controlled, walking: **goal met**.
Subjective • "I cannot find a comfortable way to feed." **Objective** • Baby not latching well • Wound hurts when she holds the baby	**ACTUAL** **Ineffective breastfeeding** related to post-operative pain and positioning difficulty as evidenced by poor latch.	Within 48 hours, breastfeeding well.	• Teach side-lying and the football hold so the baby does not press on the wound. • Give analgesia before feeds. • Watch a feed and help with the latch.	Feeding well: **goal met**.
Subjective • *No specific complaint* **Objective** • Delivered by surgery • Uterus may not contract well	**RISK** **Risk for bleeding** as evidenced by risk factors: surgical birth and possible uterine atony.	Fundus firm and lochia a normal amount.	• Check the fundus, lochia, wound and vital signs as the protocol says. • Give the uterotonic as prescribed. • Report heavy bleeding straight away.	No hemorrhage: **goal met**.
