16.5 Neonatal Sepsis

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • *No specific complaint* **Objective** • Temperature unstable • Feeding poorly, lethargic • CRP raised	**ACTUAL** **Ineffective thermoregulation** related to infection as evidenced by temperature instability.	Temperature stable within 48 hours of treatment.	• Take blood cultures and give IV antibiotics without delay, as prescribed. • Keep the baby in a neutral thermal environment. • Watch vital signs.	Stable: **goal met**.
Subjective • *No specific complaint* **Objective** • Sucks weakly • Lethargic	**ACTUAL** **Ineffective infant feeding dynamics** related to lethargy as evidenced by poor suck.	Gets enough fluid and nutrition.	• Give tube feeds or IV fluids as ordered. • Chart intake and output. • Weigh every day.	Intake adequate: **goal met**.
Subjective • *No specific complaint* **Objective** • Septic • Capillary refill 3 seconds	**RISK** **Risk for shock** as evidenced by risk factors: sepsis.	Perfusion stays stable.	• Watch capillary refill, HR, BP and urine output. • Report any deterioration at once. • Give a fluid bolus as prescribed.	Stable: **goal met**.
