16.9 Cleft Lip and Palate

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says • "The baby cannot suck well." **Objective** • Cleft lip and palate • Milk comes out of the nose during feeds	**ACTUAL** **Ineffective infant feeding dynamics** related to anatomical defect as evidenced by poor suck and nasal regurgitation.	Takes enough and gains weight.	• Use a special feeding bottle and teat. • Feed the baby sitting up. • Burp often. • Weigh regularly.	Gaining weight: **goal met**.
Subjective • Mother asks • "Why did this happen to my baby?" **Objective** • Parents upset • Mother does not want to hold the baby	**ACTUAL** **Anxiety (parent)** related to infant's defect as evidenced by distress and questions.	Parents share their feelings and can describe the plan for repair.	• Explain when the operations will be done. • If you have them, show photos of babies after cleft repair. • Encourage them to hold the baby and bond.	Parents understand: **goal met**.
Subjective • *No specific complaint* **Objective** • Gap in the palate	**RISK** **Risk for aspiration** as evidenced by risk factors: cleft palate.	No aspiration.	• Feed the baby sitting up. • Give small amounts and burp often. • Watch for coughing or colour change.	No aspiration: **goal met**.
