17.10 Congenital Heart Disease (VSD and Tetralogy of Fallot)

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says • "He turns blue when he cries." **Objective** • Cyanosed, SpO_2 78% • Has "tet" spells (hypercyanotic spells) • Fingers clubbed	**ACTUAL** **Impaired gas exchange** related to right-to-left shunting as evidenced by cyanosis and low SpO_2.	Spells happen less often and do not last as long.	• During a spell: put him in the knee-chest position and give oxygen and medication as prescribed. • Keep him calm. • Do not let him get dehydrated. • Get him ready for surgical repair.	Spells controlled: **goal met**.
Subjective • Mother says • "He gets tired and sweaty when feeding." **Objective** • Not gaining weight well • Sweats during feeds	**ACTUAL** **Ineffective infant feeding dynamics** related to fatigue during feeding as evidenced by sweating and poor weight gain.	Gains weight steadily.	• Small feeds, often. • High-calorie feeds as prescribed. • Let him rest before feeds. • Weigh regularly.	Gaining weight: **goal met**.
Subjective • *No specific complaint* **Objective** • Heart defect • Gets chest infections often	**RISK** **Risk for infection** as evidenced by risk factors: congenital heart defect (endocarditis, respiratory infections).	No infection.	• Make sure his immunisations are done. • Teach dental care. • Tell the parents to report fever.	No infection: **goal met**.
