17.3 Pneumonia in Children

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Mother says • "She coughs and breathes fast." **Objective** • 3-year-old, RR 48/min • Crackles at the right base • SpO_2 91%, chest indrawing	**ACTUAL** **Ineffective airway clearance** related to inflammation and secretions as evidenced by crackles, tachypnea and chest indrawing.	Within 48 hours, SpO_2 94% or more and less work of breathing.	• Give oxygen as prescribed. • Sit her up or semi-Fowler. • Give antibiotics on time. • Encourage fluids. • Check RR, SpO_2 and recession every 2–4 hours.	Breathing better: **goal met**.
Subjective • Mother says • "She feels hot." **Objective** • Temperature 39 °C • Flushed and irritable	**ACTUAL** **Hyperthermia** related to infection as evidenced by temperature 39 °C.	Temperature below 38 °C within 4 hours.	• Give the antipyretic by weight, as prescribed. • Dress her lightly. • Recheck the temperature after 1 hour.	Temperature down: **goal met**.
Subjective • *No specific complaint* **Objective** • Fever • Breathing fast • Drinking less	**RISK** **Risk for deficient fluid volume** as evidenced by risk factors: fever, rapid breathing and reduced intake.	Stays well hydrated.	• Offer drinks often. • Count wet diapers or record urine output. • Give IV fluids if ordered.	Hydrated: **goal met**.
