18.12 Eating Disorders

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I am still too fat." **Objective** • BMI well below normal • Restricts what she eats • Exercises far too much	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to restriction of intake as evidenced by very low BMI and food restriction.	Follows the meal plan and gains weight as the treatment team has set.	• Follow the specialist meal plan; supervise meals and the time after them. • Weigh her according to protocol, the same way each time. • Do not argue about food; keep your approach calm and the same every time. • Work with the dietitian and the mental health team.	Following the plan: **goal met**.
Subjective • "I hate my body." **Objective** • Sees her body as bigger than it is Checks herself in the mirror often	**ACTUAL** **Disturbed body image** related to distorted perception of body size as evidenced by negative statements despite low weight.	Talks about how she feels and engages with therapy.	• Talk about her feelings, not her weight. • Support her psychological therapy.	Engages: **goal met**.
Subjective • *No specific complaint* **Objective** • Has restricted severely • Starting nutritional rehabilitation	**RISK** **Risk for electrolyte imbalance** as evidenced by risk factors: malnutrition and refeeding syndrome.	Electrolytes stay normal.	• At the start, check phosphate, potassium and magnesium every day. • Check the ECG as ordered. • Give supplements as prescribed.	Values normal: **goal met**.
