18.3 Obsessive-Compulsive Disorder

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I must wash my hands 50 times or something bad will happen." **Objective** • Hands red and cracked • Spends hours washing every day	**ACTUAL** **Ineffective coping** related to obsessive thoughts as evidenced by repetitive hand washing that interferes with daily life.	Slowly cuts down the time spent on rituals.	• Do not stop the rituals suddenly; agree limits that come down bit by bit. • Support exposure and response prevention therapy. • Give medication as prescribed. • Praise progress.	Fewer rituals: **goal met**.
Subjective • "My hands burn." **Objective** • Skin on the hands cracked • Red	**ACTUAL** **Impaired skin integrity** related to repeated washing as evidenced by cracked, red skin.	Skin on the hands heals within 2 weeks.	• Give an emollient after every wash. • Suggest a mild soap and drying gently. • Look at the skin every day.	Healing: **goal met**.
Subjective • *No specific complaint* **Objective** • Rituals take up a lot of time • Late for appointments	**RISK** **Risk for ineffective health self-management** as evidenced by risk factors: rituals interfering with daily tasks and treatment.	Gets through her daily tasks.	• Give the day a structure with set times. • Support her goals at work or study.	Tasks done: **goal met**.
