18.6 Bipolar Disorder (Manic Episode)

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I do not need sleep; I have great plans." **Objective** • Speech pressured • Sleeps 2 hours a night • Constantly on the go	**ACTUAL** **Insomnia** related to manic hyperactivity as evidenced by sleep of 2 hours and continuous activity.	Within 1 week, sleeps at least 6 hours.	• Cut down stimulation, especially in the evening. • Give the mood stabiliser and other drugs as prescribed. • Encourage quiet activities. • Record how many hours he sleeps.	Sleeping better: **goal met**.
Subjective • "I have no time to eat." **Objective** • Too busy to eat • Lost 3 kg	**ACTUAL** **Imbalanced nutrition: less than body requirements** related to hyperactivity and poor attention to meals as evidenced by weight loss.	Weight steady.	• Offer high-calorie finger foods and drinks he can take on the move. • Chart what he eats. • Weigh twice a week.	Weight steady: **goal met**.
Subjective • *No specific complaint* **Objective** • Impulsive • Judgment poor • On lithium	**RISK** **Risk for injury** as evidenced by risk factors: impulsive behaviour, exhaustion and possible lithium toxicity.	No injury, and lithium level within the therapeutic range.	• Set clear limits and keep them the same. • Check lithium levels and watch for signs of toxicity (vomiting, tremor, confusion). • Keep his fluid and salt intake steady.	No injury: **goal met**.
