19.1 Home Care After Discharge

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • His wife says • "I do not know how to change his dressing or give his injections." **Objective** • Sent home with a wound and on insulin • His wife does most of the caring • Medicines kept the wrong way	**ACTUAL** **Deficient knowledge (caregiver)** related to home care procedures as evidenced by questions and incorrect storage of medicines.	Within 3 home visits, his wife does the wound care and injections correctly.	• Look at the home and at what the caregiver can manage. • Teach each procedure and watch her do it back. • Write out a medication schedule. • Set up regular home visits and give contact numbers.	Does it correctly: **goal met**.
Subjective • "The house is not suitable for a wheelchair." **Objective** • Steps at the front door • Bathroom too small for a wheelchair	**ACTUAL** **Ineffective home maintenance behaviors** related to environmental barriers and reduced mobility as evidenced by unsuitable home layout.	Within 2 weeks the family has made basic changes to the home.	• Suggest ramps and grab bars, and taking up rugs. • Refer to occupational therapy and social services.	Changes made: **goal met**.
Subjective • *No specific complaint* **Objective** • Patient depends on others for care • Only one person caring for him	**RISK** **Risk for caregiver role strain** as evidenced by risk factors: high care demands and lack of support.	Caregiver names where she can get respite.	• Ask about the caregiver's own health and stress. • Bring other family members in. • Put her in touch with community services.	Respite found: **goal met**.
