19.3 School Health

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • Teacher says • "Many children come to school without breakfast and complain of headaches." **Objective** • Screened pupils have low hemoglobin • Few places to wash hands	**ACTUAL** **Deficient community health** related to limited health programmes in the school as evidenced by anemia and poor hygiene facilities.	Within one term, the school starts a health education and screening programme.	• Work out the school's health needs with the staff. • Organise screening for vision, hearing, growth and anemia. • Teach hygiene and nutrition in sessions suited to each age. • Work with parents and the school administration.	Programme started: **goal met**.
Subjective • Pupils say • "We do not know how to wash hands properly." **Objective** • Washing hands the wrong way • No soap in the toilets	**ACTUAL** **Deficient knowledge** related to hand hygiene as evidenced by incorrect technique.	Pupils wash their hands correctly.	• Show them the hand washing steps. • Use songs or posters. • Push for soap and water to be available.	Shown correctly: **goal met**.
Subjective • *No specific complaint* **Objective** • Classrooms crowded • Poor sanitation	**RISK** **Risk for infection** as evidenced by risk factors: crowding and poor sanitation.	School reports fewer absences because of infection.	• Check immunisation status. • Teach how to cough and sneeze safely. • Report any outbreak to the health authorities.	Fewer absences: **goal met**.
