2.24 Discharge Planning

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I am not sure how to take my new medicines." **Objective** • Cannot explain when to take each medicine • New prescriptions on discharge	**ACTUAL** **Deficient knowledge** related to new treatment regimen as evidenced by inaccurate statements about medications.	Before discharge, can give the name, dose, timing and main side effects of every medicine.	• Find out what she knows, how well she reads and which language she prefers. • Teach one medicine at a time in simple language, with a written schedule. • Use teach-back to check she has understood. • Include the family member who helps her with medicines.	Explains her medicines correctly: **goal met**.
Subjective • "I often forget my medicines at home." **Objective** • Has been readmitted before • Often misses doses	**ACTUAL** **Ineffective health self-management** related to complex regimen as evidenced by missed doses and readmissions.	Can describe how she will manage her treatment at home.	• Ask the physician whether the regimen can be made simpler. • Suggest a pill organiser and reminders. • Book a follow-up appointment.	Gives a plan that is realistic: **goal met**.
Subjective • A relative says • "I don't know how I will manage." **Objective** • Needs help with all ADL • Only one person to care for him	**RISK** **Risk for caregiver role strain** as evidenced by risk factors: patient dependence and lack of support.	Before discharge, the caregiver can name where support will come from.	• Find out what the caregiver can manage and what they need. • Teach the care skills needed. • Refer to community or social services.	Caregiver names sources of support: **goal met**.
