2.5 Immobility

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I cannot move my legs well." **Objective** • Limited range of movement in both legs • Needs help to turn in bed • Muscle strength 3/5	**ACTUAL** **Impaired physical mobility** related to neuromuscular impairment as evidenced by limited ROM and inability to turn without help.	Within 1 week, joint ROM is kept and he moves with assistance.	• Check muscle strength and ROM every day. • Do passive or active ROM exercises 3 times a day. • Turn him every 2 hours and support him with pillows. • Agree a mobility plan with the physiotherapist. • Bring in assistive devices where they help.	No contractures, movement getting better: **goal met**.
Subjective • "I need help to wash." **Objective** • Cannot reach the lower half of his body • Needs a hand with bathing	**ACTUAL** **Bathing self-care deficit** related to impaired mobility as evidenced by inability to wash body parts.	Within 3 days he takes part in his own bath as far as he is able.	• Find out how much he can do on his own. • Put soap, towel and basin where he can reach them. • Let him do what he can, and help with the rest. • Keep him covered and protect his dignity.	Washes his face, arms and chest himself: **goal met**.
Subjective • Says his calves feel heavy **Objective** • On bed rest for over 3 days • Age 68 years • Had surgery recently	**RISK** **Risk for thrombosis** as evidenced by risk factors: immobility, older age and recent surgery.	No DVT: no pain, swelling or redness in the calves.	• Check both calves every day for pain, swelling and warmth. • While awake, he should do ankle pumps and leg exercises every hour. • Put on compression stockings or devices if ordered. • Give the prophylactic anticoagulant as prescribed. • Keep him well hydrated.	No signs of DVT during the admission: **goal met**. Swelling of one leg or sudden breathlessness must be reported at once.
