2.8 Infection and Isolation Precautions

Assessment	Nursing Diagnosis	Plan / Expected Outcome	Nursing Interventions	Evaluation
Subjective • "I feel lonely in this room." **Objective** • In a single room under contact isolation • Few visitors • Quiet and withdrawn	**ACTUAL** **Social isolation** related to infection control precautions as evidenced by expressed loneliness and withdrawal.	Within 48 hours, says she feels less lonely.	• Explain why she is isolated and roughly how long it will last. • Drop in and chat with her regularly, not only when a procedure is due. • Encourage phone calls with the family. • Show visitors how to wear protective equipment properly so they can keep coming.	Says she feels less alone: **goal met**.
Subjective • "Why do the staff wear gowns?" • "Can my children visit?" **Objective** • Takes the mask off at the door • Hand hygiene done wrongly	**ACTUAL** **Deficient knowledge** related to transmission precautions as evidenced by questions and incorrect practice.	Within 24 hours, patient and family show correct hand hygiene and precautions.	• Explain how this organism spreads. • Demonstrate hand hygiene, and how to put on a mask and gown. • Give written instructions. • Watch them do it back.	Doing it correctly: **goal met**.
Subjective • *No specific complaint* **Objective** • Culture grows a multidrug-resistant organism • Has an IV cannula and a urinary catheter • Long hospital stay	**RISK** **Risk for infection** as evidenced by risk factors: invasive devices and prolonged hospitalization.	No new infection: temperature and WBC normal, device sites clean.	• Hand hygiene before and after every contact. • Keep equipment for this patient only. • Check device sites daily and take out any device that is no longer needed. • Watch temperature and WBC.	No new infection: **goal met**.
